LG, LGX & LGX-SA equipped with Seymour Duncan[™] Pick-up Configuration

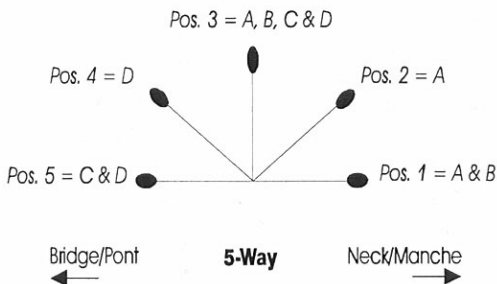

The 'Jazz' humbucker in the neck position and the modified 'Custom Custom' in the bridge were selected by Seymour Duncan himself specifically for use with the LG, LGX & LGX-SA.

Seymour also created a special cosmetic treatment for the LGX & LGX-SA. The pickup cover is black, nickel plated, nickel silver. Unlike the chrome plated brass covers used on cheaper pickups, nickel silver has no magnetic effect on the pickup and therefore doesn't affect the tone. Brass covers tend to suck out high end response.

Note: The push/pull 'Passive Filter' circuit is not used with the Seymour Duncan[™] equipped LG, LGX & LGX-SA guitars, however, the 'tone' control operates as normal.

(covered version on LGX & LGX-SA)

Note: the numbers 1 through 5 above refer to the 5-way switch positions. Number '1' corresponds to the switch position closest to the neck and number '5' is the position all the way back towards the bridge.
